Speech Therapy

Our speech-language pediatric therapy program consists of three speech-language pathologists who will provide the evaluation and treatment of speech impairments including:

- Delayed language learning
- Articulation
- Apraxia of speech
- Literacy development
- Treatment of autism
- Pediatric dysphagia and eating disorders
- Fluency disorder
- Phonological disorders

After an initial evaluation, each child will receive an individualized treatment plan based on assessment results and the child's personal needs. Therapy is goal-oriented and progress will be monitored closely by the speech therapist to ensure your child is maximizing their potential for success. Treatment is provided in a pediatric therapy room through structured play activities to make learning meaningful and fun!

Physical Therapy

The physical therapy pediatric department consists of therapists that examine, evaluate, diagnosis and treat children from birth to adolescence who are experiencing functional limitations or disability due to trauma, a disorder or disease process. These conditions may include:

- Cerebral palsy
- Genetic syndromes
- Hydrocephalus
- Spina bifida
- Juvenile rheumatoid arthritis
- Scoliosis
- Muscular Dystrophy
- Torticollis
- Developmental delays

The goal of treatment is to diminish impairments and functional limitations to prevent or decrease disability. Treatment may be focused in improving developmental tasks, motor planning, manipulation skills, balance, and/or coordination.

Preparation Steps to your Pediatric Therapy Session

Schedule an appointment with your doctor to determine if therapy services are needed for your child.

Get a physician referral for any therapy evaluation your doctor feels is necessary.

Contact your insurance company to confirm therapy reimbursement and to discuss the number of sessions allowed.

Bring the physician referral and your insurance information to the initial appointment to complete paperwork.
