*Radiology charges can have many variances dependent on number of views required, complete exam, unilateral exam, etc. One area w/ large variance can be X-rays of the Spine dependent on location of the spine, if an injection/epidural is present, etc. Prices in those situations involving much higher care may be higher. Call for specific pricing based on CPT/procedure.

**CT & MRI charges are estimations based on procedures WITHOUT contrast. When contrast is required, prices may be higher. Call for specific estimates

***These are only for the room/bed boarding charge and are charged once per day. Total inpatient stay will have many other factors and charges included.

****These are ESTIMATES of the entire stay (including room/bed when necessary, lab, radiology, supplies, pharmacy, procedures, etc.). But these are based on the average charge gathered from a year's worth of deliveries and procedures and in no way guarantee a standard charge. There are many factors that could influence your cost dependent upon complications, additional orders/procedures/etc. so the actual cost can be less or more than these averages. Call for a more specific estimate.
